

Project Management Professional (PMP)

Project Management Professional (PMP) is a credential offered by the Project Management Institute (PMI) USA. It is recognized globally by Government, Industry and Academia as a benchmark for competency of Project Managers across domains. All current and future PM's are recommended to achieve this certification at the earliest in their careers to be at a competitive advantage over others. It is in high demand and sought after by employers and customers equally. This recognition is seen through increased marketability to employers and higher salary; according to the PMI Project Management Salary Survey—Seventh Edition, certification positively impacts project manager salaries.

We prepare candidates to take the PMP exam and provide complete guidance on how to crack the exam in one shot. The faculties are all PMP certified and have already handled many such students in the past. The curriculum prepares the candidates around the PMI prescribed PMBOK guide and equips them with all the necessary knowledge required in the field. Our training program also provides 35 PDU's to the trainees, which is necessary pre-requisite to apply for PMP certification.

Who should attend?

This course is meant for professionals working or aspiring to be in the profession of Project management across industries. You should get this certification at the earliest in your career to stay ahead in competition. Below roles are ideal for the certification:

- Team members or Team Leads, with 3 years or more experience in any role in a project
- Working project managers who want to gain credibility and recognition
